Stabilizer Pads - Square

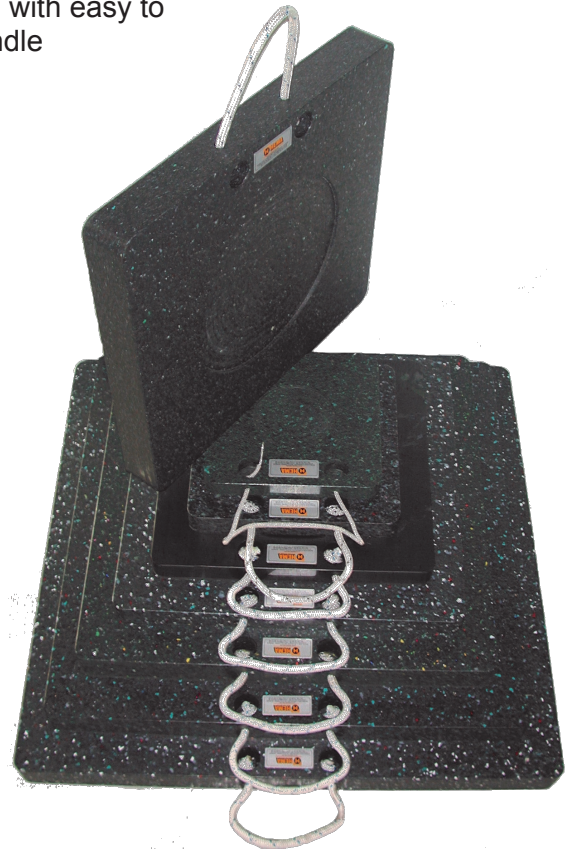

Stabilizer pads are made of polyethylene plastic, which makes them water and moisture resistant, and are reasonably resistant to cold and frost.

The flexibility of the pads also provides support on slightly uneven surfaces.

The stabilizer pads are all supplied with 10 mm handles in a strong and pliant nylon fabric.

Transport cartridges of all sizes are available in galvanized versions with lock splits, some in single and some in double versions.

Stabilizer Pads come in a wide assortment, with easy to use handle
