

# HEMA MINI GRAPPLE

The mini grapples are designed for a working pressure of 180-200 bar, making them suitable for almost all truck cranes and mini excavators.

The grapple's low weight and low height makes it perfect for mounting on smaller cranes and mini excavators.

With its low height, the mini-grapple can be used as a load/unload grapple on mini excavators that often have a relatively low lifting height.

The mini-grapple is prepared for mounting by link or rotator with mounting flanges 140x140xC17.

The mini-grapple is a supplement to HEMA's standard program, which is mainly aimed at the heavier sector within the transport and contractor industry, to meet the great demand for smaller and lighter tools for smaller cranes.

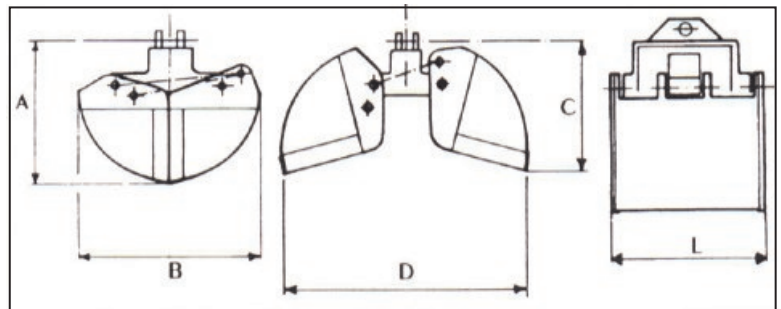

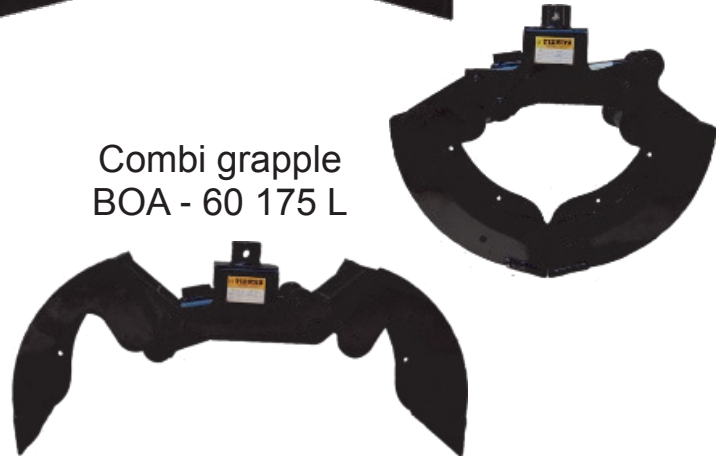

HEMA can deliver additional models than those shown. Request a brochure for the other models by contacting HEMA Crane Equipment.

The grapple is delivered with individual bolt-mounted link for a rotator with a shaft.

Soil grapple  
BO - 60 175 L

Combi grapple  
BOA - 60 175 L
