## Bulk Grapple

The bulk grapple is designed for a working pressure between 200-330 bar, which makes it suitable for many of the larger excavators, mobile cranes and bulk cranes.

The bulk grapple is suitable for the handling of different materials, such as salt, grain, chips, fertilizer etc., by simply selecting the appropriate shells.

The shells are available in different materials, including stainless steel.

The bulk grapple is mounted with strong bolts.

There are replaceable bushings and guide bearings in all moving joints.

It offers individual adjustment of link, with or without swivel joints.

We also offer other models which are delivered according to request, such as electric hydraulic.

**Bulk grapple 4C**  
50-80 1500 L

**Bulk grapple 4C2**  
60-100 5000 L
