

HEMA

Wood Chip Grapple S- series

The wood chip grapple is designed for a working pressure of 200-350 bar, making it applicable to almost all types of cranes and excavators.

The S-series is HEMA's new grapple designed for truck operators and contractors.

The series is designed to be used where demands are placed on the grapple's strength in terms of when grabbing wood chips, sawdust, sphagnum or similar materials.

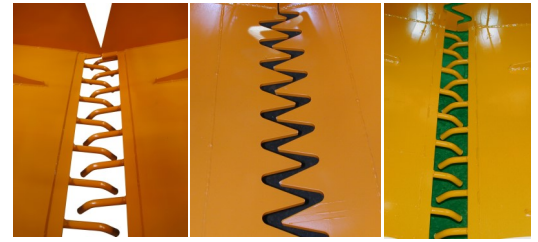

The special blades, help break through the compact mass easier.

The HEMA grapple opens so that the blades are vertical, allowing you to grab all the way out to the sides.

The main bolts are spread wide apart to achieve good stability between the grab shells.

The s-series has powerful bolts and bushings in all of its moving points causing durability and longevity.

The s-series are delivered with adjustable cylinders as in previous models, with the possibility to compensate for any possible wear in the future.

Blades are constructed to easily break the often compact mass.
