

HEMA

Clamp Device

The HEMA clamp device is designed for handling of refrigerators and other appliances, televisions and similar products that are to be disposed of, such as cardboard and paper bales.

The clamp device is designed for a safe, easy and gentle handling of various items.

The device's lightweight and narrow construction makes it useful for both collecting and unloading as there is not much space being wasted.

For some items, it is important that the pressure from the clamp is not to big. Therefore, the clamp devices are mounted with an adjustable pressure reduction valve.

The clamp device can be mounted with link suitable for rotator shafts in many different dimensions.
