

# HEMA

## Helicopter Yoke

The HEMA helicopter Yoke is designed for handling boats, portable cabins, pavilions and other items that require gentle rigging.

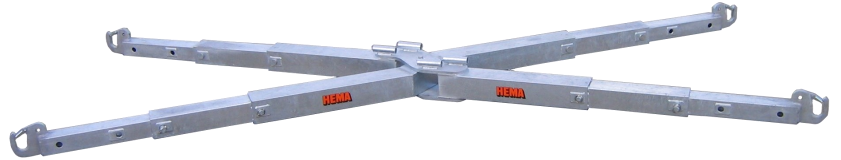

The yoke has a large opening span, but can also be fully folded so that it does not take up much space during transportation with it's length of 2400 mm.

The HEMA helicopter yoke is delivered hot-galvanized, making it resistant to among other things salt water.

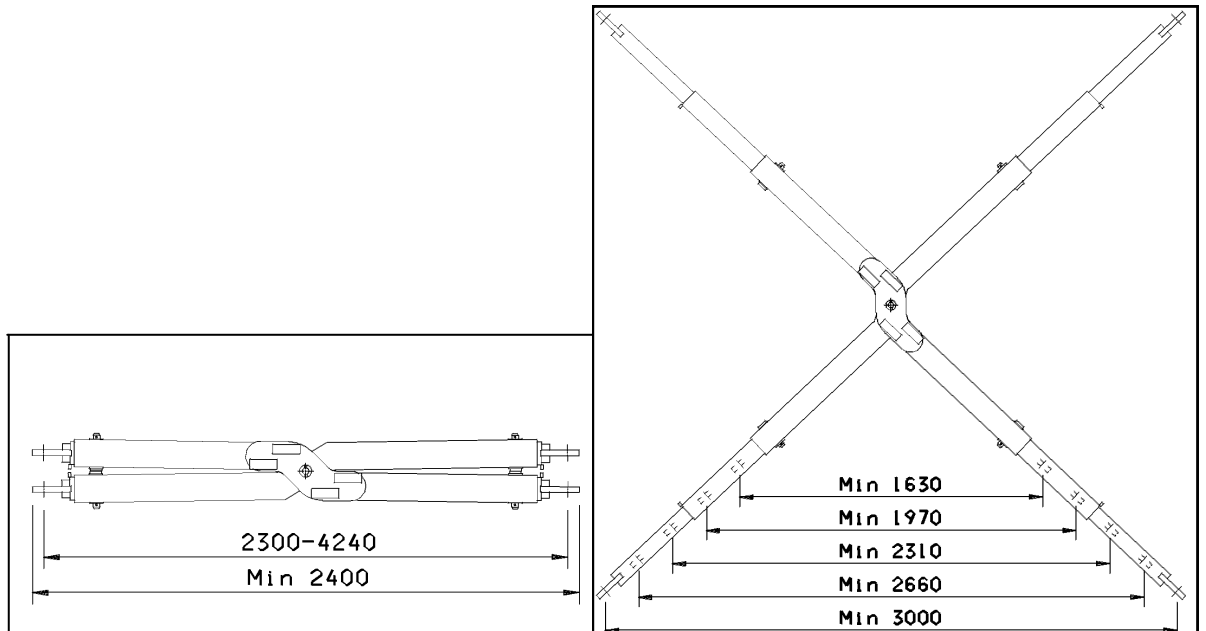

The yoke is mounted with special hooks with safety locks and has a 90o spread and is pushed out with two telescopic pipes.

HEMA can provide suitable wire or chain kits for the spreader beam for rigging the crane hook.

Upon request HEMA also provides other types of yokes with varying capabilities and dimensions.

Helicopter Yoke KÅ-T3000 10 Tons  
with 2 telescopic extensions
