

HEMA

Hydraulic PowerPack

Hydraulic Powerpack is the solution for driving with a mobile crane, where a hydraulic tool is needed.

The powerpack can be lifted in the hook and the 15 HP petrol engine with automatic choke can be started/stopped and operated with the included remote control.

HEMA Powerpack is easy to mount on various tools such as grapples, driving plate yokes or others, where there is a need for hydraulics.

The weight of the tool underneath the Powerpack is carried through the lifting tube, thereby avoiding burden on the construction itself.
