

HEMA

Wood Crusher

The wood crusher is designed for a working pressure between 200 - 330 bar, making it applicable for most larger excavators, mobile cranes and bulk cranes.

The wood crusher is suitable for cutting down demolished trees and waste trees.

The wood crusher is also suitable for handling large and heavy goods.

The wood crusher is fitted with powerful bolts and replaceable bushings and guide bearings in all pivot joints.

Individual adjustment of link, with or without swivel joints.

Other models are also delivered as an Electro-Hydraulic or wire-grapple.
